

BE A RECYCLING ROCKSTAR!

Your school has a new way to reduce waste, create compost that helps plants grow, and/or create clean energy!

First, students will place unopened, unpeeled, and uneaten food on the Share Table.

Then, students will sort their waste into the appropriate buckets.

Food waste will be collected for composting or anaerobic digestion (clean energy production)!

This new recycling process is good for the environment, saves money, and teaches responsibility. Ask about Service Learning opportunities!
